Grisms for FOCAS

| Grism name | ［Groovs／mm］ | Prism（deg．，material） | 1st order | 2nd order | Grating | Assy |
| :---: | :---: | :--- | :---: | :---: | :---: | :---: |
| Very low | 75 | 5.75, S－FSL5 | $284 @ 650 \mathrm{~nm}$ |  | RGL |  |
| Low | 150 | 11.55, S－FSL5 | $571 @ 650 \mathrm{~nm}$ | $714 @ 400 \mathrm{~nm}$ | RGL |  |
| Middle blue | 300 | 19.7, S－FSL5 | $1,000 @ 550 \mathrm{~nm}$ |  | Jovin Yvon |  |
| Middle red | 300 | 26.1, S－BSL7 | $1,426 @ 750 \mathrm{~nm}$ | $1,574 @ 390 \mathrm{~nm}$ | RGL |  |
| Echelle | 175 | 45.0, S－FSL5 |  | $2,498 @ 972 \mathrm{~nm}$ | RGL |  |
|  |  |  |  |  |  |  |
| VPH450 | 1,000 | 20, PBM3 $\times 2$ | $3,104 @ 450 \mathrm{~nm}$ |  | JWU | Ebizuka |
| VPH520 | 990 | 20, S－BAH28 $\times 2$ | $3,402 @ 520 \mathrm{~nm}$ |  | JWU | Ebizuka |
| VPH650 | 665 | 20, PBM3 $\times 2$ | $2,772 @ 650 \mathrm{~nm}$ |  | Ralcon | Kadomi Opt． |
| VPH850 | 364 | 16, S－BSL7 $\times 2$ | $1,655 @ 800 \mathrm{~nm}$ |  | Ebizuka | Ebizuka |
| VPH900 | 560 | 20, S－BAH28 $\times 2$ | $2,938 @ 900 \mathrm{~nm}$ |  | JWU | Ebizuka |
|  |  |  |  |  |  |  |
| VPH680 | 1,572 | $20, \mathrm{ZnSe} \times 2$ | $8,195 @ 680 \mathrm{~nm}$ |  | JWU | Kogakugiken |
| VPH800 | 1,318 | $20, \mathrm{ZnSe} \times 2$ | $7,365 @ 800 \mathrm{~nm}$ |  | Ralcon | Topcon |
| VPH950 | 1,111 | $20, \mathrm{ZnSe} \times 2$ | $6,944 @ 950 \mathrm{~nm}$ |  | Ralcon | Topcon |

Relative efficiencies of grisms with Subaru Telescope and FOCAS

Diffraction efficiencies of new VPH grisms

Dispersion of surface relief grisms

Dispersion of VPH grisms with glass prisms

Dispersion of VPH grisms with ZnSe prisms

Cryogenic VPH Grisms for MOICR（Ebizuka et．al．，PASJ，63，2011）

Transmittance of materials for cryogenic VPH grisms

## Efficiencies of SR and VPH Gratings

Surface relief grating：
Efficiency decreases steeply below $4 \Lambda / \lambda$ ．

VPH（Volume Phase Holographic）grating（ $\Delta \mathrm{n} \sim$ 0.02 ）：Efficiency increase up to $100 \%$ below $4 \Lambda / \lambda$ ．

Diffraction efficiencies of Y band VPH grating

Dispersion of VPH grisms with ZnSe Prisms

| Grism name | ［Groovs／mm］ | Prism（deg．，material） | 1 st order | Peak Efficiency［\％］ | VPH grating |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Y band | 1,025 | $20.0, \mathrm{ZnSe} \times 2$ | $3,150 @ 1,025 \mathrm{~nm}$ | 78,77 | Soma opt． |
| J band | 819 | $19.8, \mathrm{ZnSe} \times 2$ | $3,000 @ 1,250 \mathrm{~nm}$ | 73,82 | Tohoku Univ． |
| H band | 614 | $20.0, \mathrm{ZnSe} \times 2$ | $2,950 @ 1,650 \mathrm{~nm}$ | 73,70 | Tohoku Univ． |
| K band | 431 | $18.5, \mathrm{ZnSe} \times 2$ | $2,640 @ 2,200 \mathrm{~nm}$ | 77,80 | JWU |

## Conclusions

－The second diffraction order of FOCAS echelle grism is used for long slit and multi－slit mode．
－VPH gratings are useful not only for high dispersion applications but also for lower dispersion applications．
－Hologram resin is transparent at K band．
