

Subaru large surveys

Masahiro Takada (Kavli IPMU)
on behalf of HSC and PFS collaborations

東京大学
THE UNIVERSITY OF TOKYO

Subaru WS @ NAOJ, March 2017

Imaging and spectroscopic surveys with Subaru

- Build wide-field camera (Hyper Suprime-Cam) and wide-field multi-object spectrograph (Prime Focus Spectrograph) for the Subaru Telescope (8.2m)
- HSC imaging survey since 2014
- PFS survey will start around 2020
- Keep the Subaru Telescope a world-leading telescope in the TMT era
- Precise images of 1B galaxies
- Measure distances of $\sim 4M$ galaxies

Subaru (NAOJ)

HSC

PFS

HSC SSP survey since 2014

PI: S. Miyazaki
(NAOJ)

International collaboration (Japan, Taiwan, Princeton U.)
Subaru 300 nights already granted

HSC SSP Survey Fields

- Three-layer survey
 - Wide: 1400 sq. deg, grizy ($i \sim 26$)
 - Deep: 26 sq. deg, grizy ($i \sim 27$)+3NBs
 - UltraDeep: 3.5 sq. deg., grizy ($i \sim 28$)+3NBs

HSC collaboration meeting@IPMU, Aug 2016

~300 CoIs

First Data Release (DR1) of HSC SSP

28 Feb, 2017

~60 Subaru nights, ~100 sq. deg., ~ 10^8 objects \approx 10yrs SDSS
A series of science papers will come out this April

		Deep	7	28	8.0	16,269,129	4.0.2
		Wide	5	456 (178)	245.0	183,391,488	4.0.2

Table 3. Summary of this public release and previous internal data releases. The area is estimated by using HEALPix index system ($N_{side} = 2^{11}$) and mosaicking information from the pipeline processing. The 5th column gives the survey area in square degrees. The full-color full-depth area in the Wide survey is shown in the parenthesis. Only the full-color full-depth Wide area is included in this release, but the area in the brackets in the top row is smaller than the total area. This is primarily because the release area is determined on a patch by patch basis, but a fraction of the area in the patches on the field borders actually do not reach the full depth. The 7th column shows the number of objects; since the deblender became functional in the S15A release, the numbers for the subsequent releases are for primary objects (detect_is_primary=True; see Section 4.3).

A good start to learn about/get to know Subaru (HSC) data?

Subaru Prime Focus Spectrograph (PFS)

Spectrograph System (SpS)

Prime Focus Instrument (PFI)

Subaru prime focus

Two sets of fiber connectors

cable C

PFI

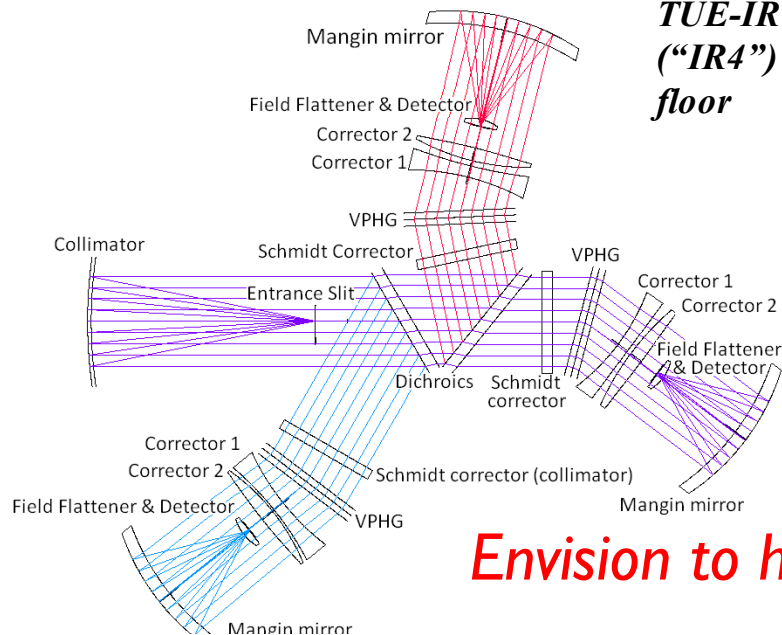

cable B

4 spectrographs

cable A

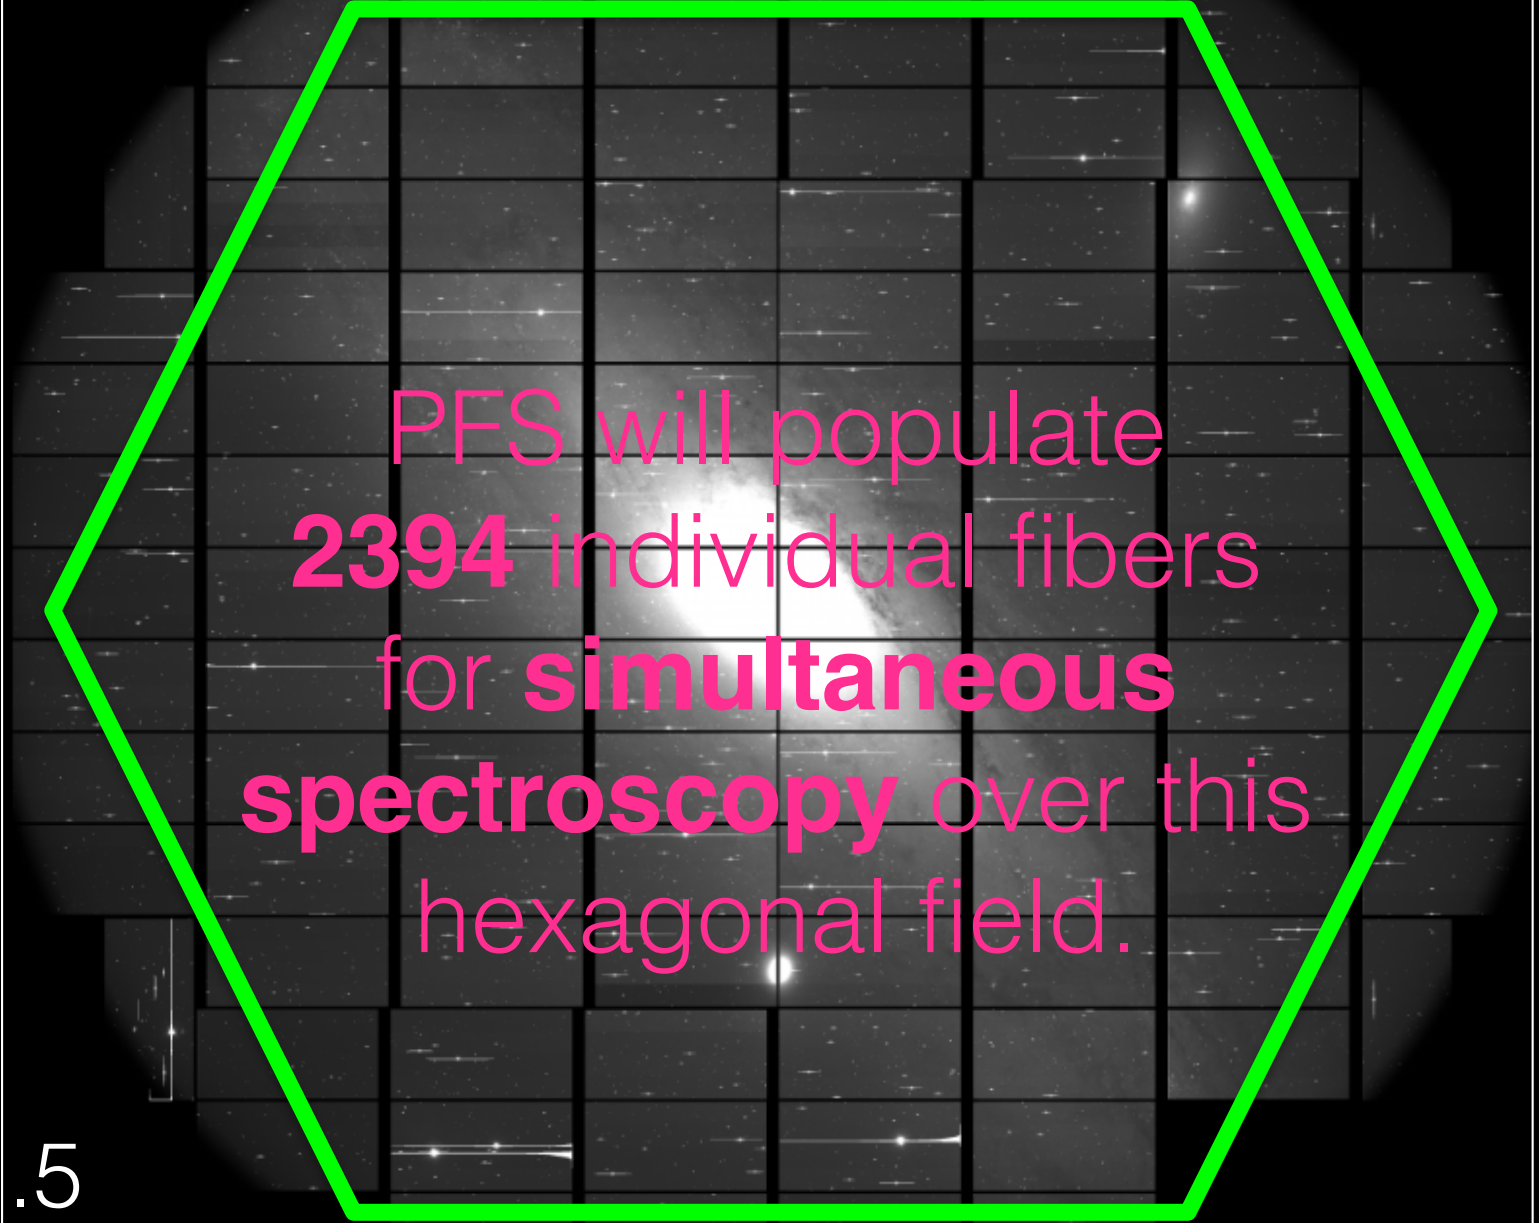

Fiber slit assembly at the spectrograph side of Cable A

TUE-IR
("IR4")
floor

Envision to have the first light in 2018

PFS will populate
2394 individual fibers
for **simultaneous**
spectroscopy over this
hexagonal field.

Science Objectives: Three Pillars

All science cases are based on a spectroscopic follow-up of objects taken from the HSC imaging data

- Cosmology (~100 nights)
 - ~4M redshifts of emission-line galaxies
 - BAO at each of 6 redshift bins over $0.8 < z < 2.4$
 - Cosmology with the joint experiment of WL and galaxy clustering (HSC/PFS)
- Galaxy evolution studies (~100 nights)
 - A unique sample of galaxies (~1M) up to $z \sim 2$, with the aid of the NIR arm
 - Dense sampling of faint galaxies (also many pairs of foreground/background gals)
 - Studying cosmic reionization with a sample of LAEs, LBGs and QSOs
- Galactic Archaeology (~100 nights)
 - ~1M star spectra for measuring their radial velocities
 - Use the 6D phase-space structure, in combination with GAIA in order to study the origin of Milky Way (also use the M31 survey)
 - Use a medium-resolution-mode survey of ~0.1M stars to study the chemo-dynamical evolution of stars in Milky Way

Power of PFS

Takada et al. 2014

Densest galaxy sample at $z > 1$... before WFIRST (NASA: 2025-) PFS (8.2m) for $z \sim 1.5$ slice

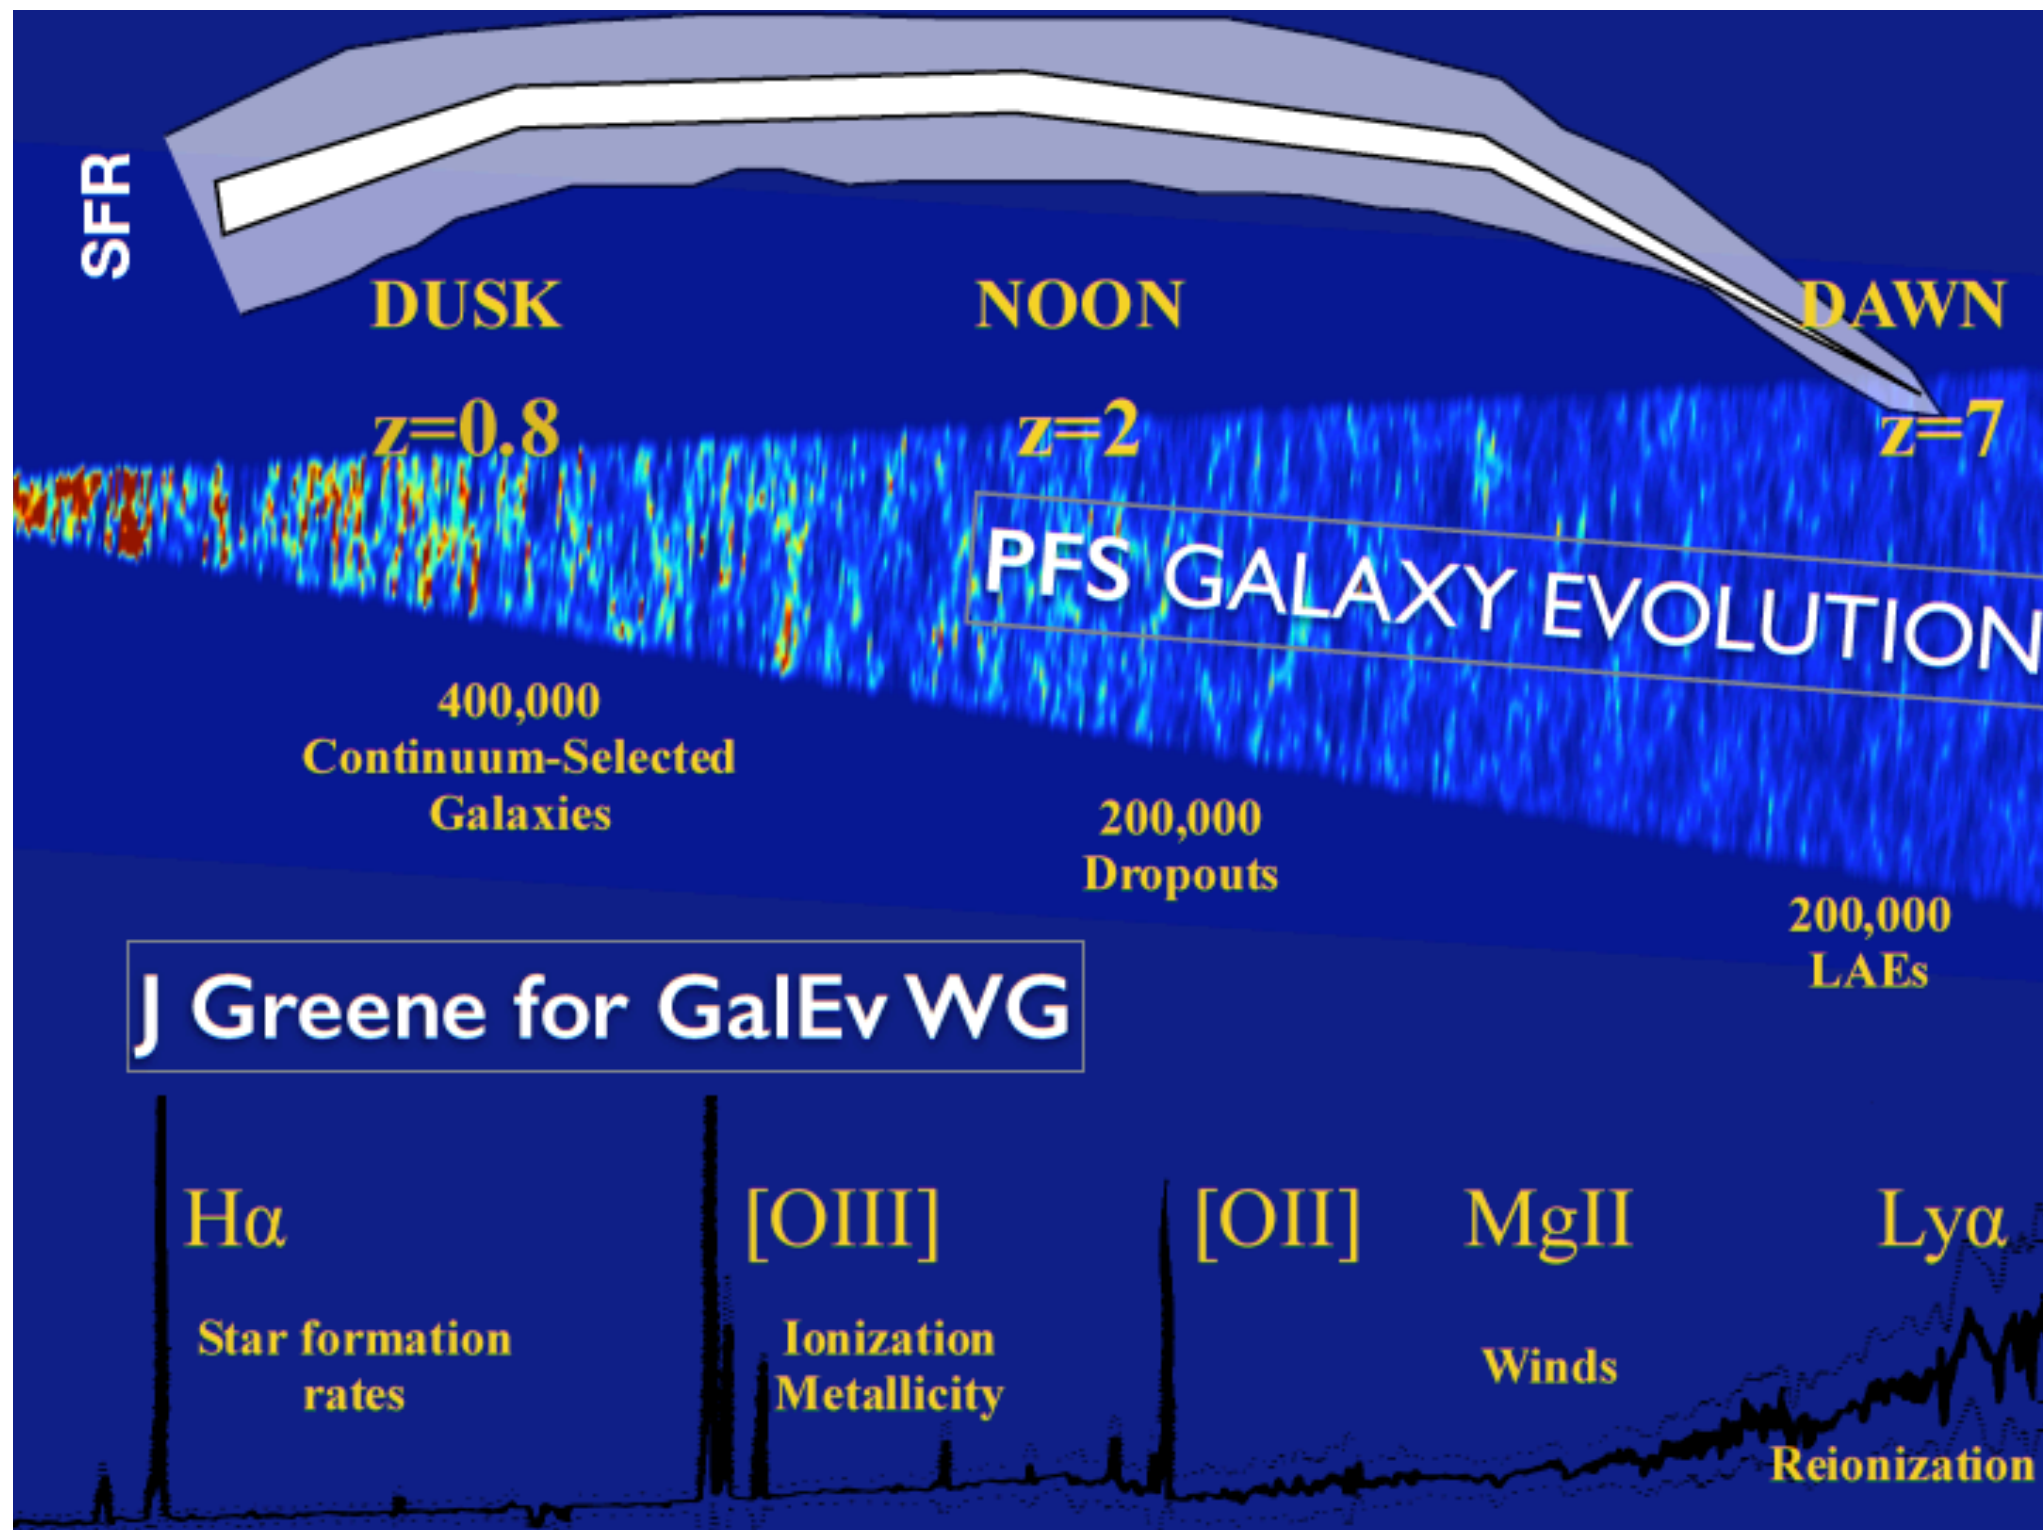

4m-class tel.

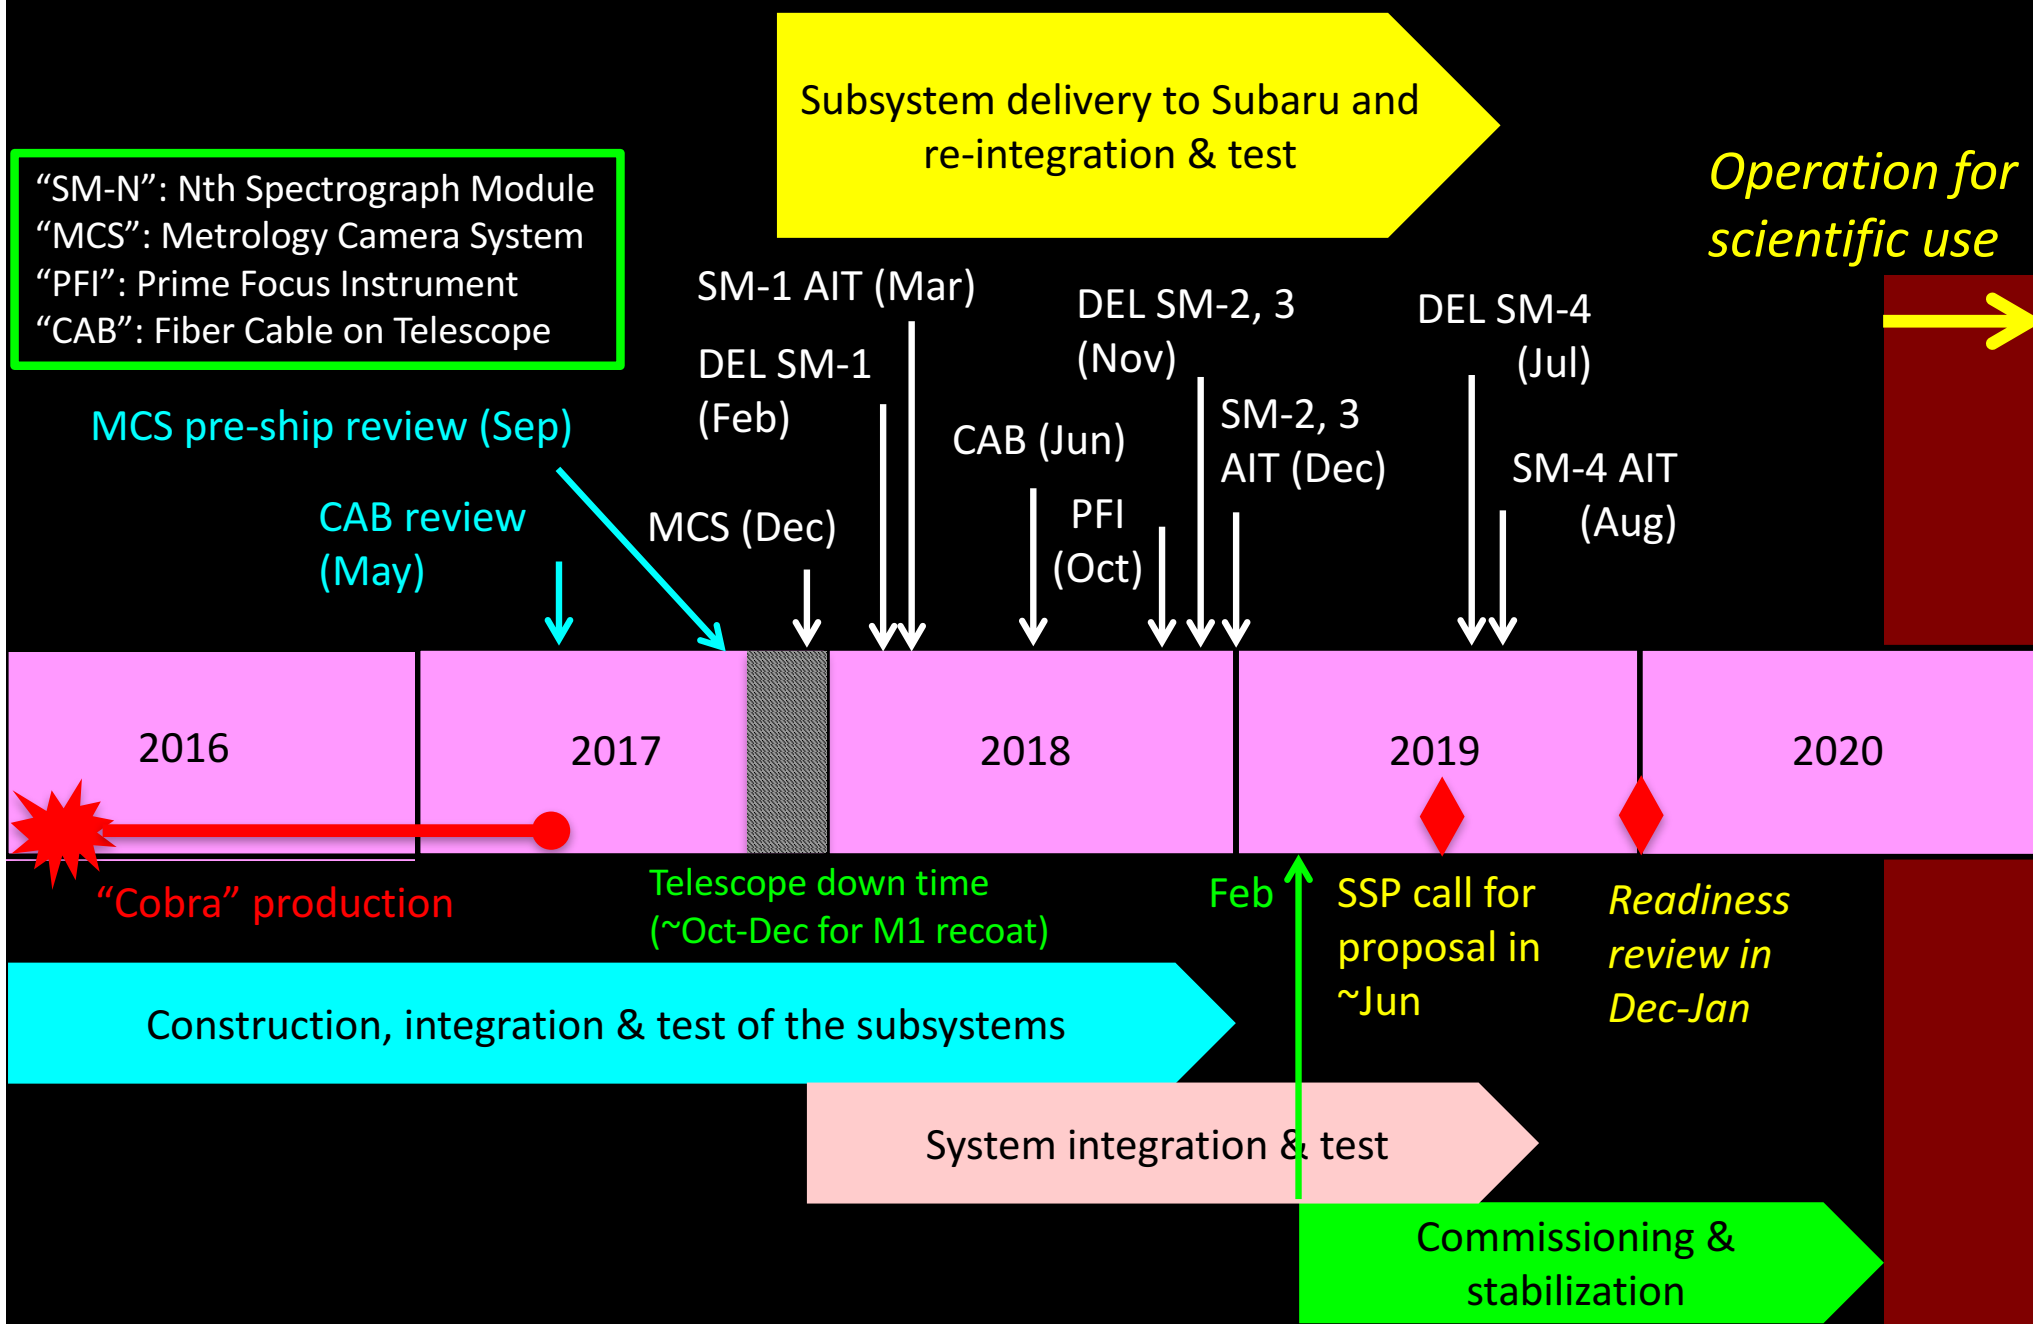

PFS Galactic Archaeology

Updated top-level schedule

*Subject to changes
until the end ...*

Subaru Strategy with the Future

- HSC & PFS allow for making Subaru Tel. a unique facility in 2020era: target obs \Rightarrow survey telescope
- HSC, PFS, GLAO major instruments in 2020era
- Various synergies
 - GAIA (2013)
 - Euclid (2019)
 - LSST (2020? -)
 - WFIRST (2025?)
 - TMT& E-ELT (202?)

E-ELT & TMT

HSC microlensing constrain on PBH abundance

A mass fraction of PBHs to DM
 $f = \Omega_{\text{PBH}} / \Omega_{\text{DM}}$

dense (2min)
cadence
data of M31

Summary

- **The wide-field capability of Subaru** is so unique, and very powerful for survey-oriented astronomy/cosmology
- **Hyper Suprime-Cam (HSC)** = Wide-field imager
 - HSC SSP survey: 2014 – 2019(20)
 - **First public data release (28 Feb, 2016)**
- **Prime Focus Spectrograph (PFS)** = Wide-field, multi-object spectrograph
 - Envision PFS SSP survey: 2020 –
 - Cosmology, Galaxy Evolution, Galactic Archaeology
 - Currently working of designing survey/science programs
